Nairobi, April 7th, 2020
COVID-19: Global Impacts
COVID-19*: A Global Crisis

*Cases as of 25th March 2020.

Source: WHO/ESRI / WHO Dashboard [https://experience.arcgis.com/experience/685d0ace521648f8a5beeeee1b9125cd](https://experience.arcgis.com/experience/685d0ace521648f8a5beeeee1b9125cd)
1. Gender balance in healthcare workers
   • Women are a disproportionate part of the health workforce and as primary caregivers to children, the elderly, and the ill

2. Health implication
   • Women might experience less access to health services than men due to marginalization
   • The pandemic has disrupted women’s access to sexual and reproductive health facilities and gender-based violence services.
   • Women stayed away from medical facilities due to quarantine restrictions or misconceptions about virus transmission, and were forced instead into riskier home births.
Global Covid-19 Effects on Women 2/2

3. Political participation
   - Women are not included in decision making processes for outbreak preparedness and response. There is inadequate women's representation in national and global COVID-19 policy spaces.

4. Social support
   - The COVID-19 pandemic could have serious consequences for women’s health and safety. During this period of partial or full isolation/quarantine, women find are exposed to more domestic violence and this confinement often results in increase of abuse.
   - The stay at home policies for school aged children will lead to more burden to women as primary care takers at home.

5. Employment and income
   - Women are more likely to be engaged in the informal sector and be hardest hit economically by COVID-19.
   - Women’s jobs are considered a lower priority in a heterosexual relationship when disruptions come. Due to school closures and household isolation, women are more likely to move from paid jobs to unpaid ones, meaning taking care of children and household responsibilities.
   - Women are more vulnerable to unemployment. Once losing their jobs, some women’s lifetime earnings will never recover. It could also exacerbate existing financial inequality between men and women.
1. Physical health

- Evidence for COVID-19 shows older persons are the most vulnerable group with higher fatality rate.
- Older Persons and people living with disabilities (PLWD) might be at increased risk of severe acute respiratory syndrome coronavirus 2 infection or severe disease because of existing comorbidities, and might face additional barriers to health care during the pandemic.
- People with disabilities (PWD) and older persons are most vulnerable to the impact of low quality or inaccessible health-care services due to physical and financial constraints.
Global Covid-19 Effects on Older Persons and Persons with Disabilities (Preferred Language) 2/2

2. Mental health
   • Previous social and community services for older persons and PLWD may be disrupted. Social disconnection puts older adults at greater risk of depression and anxiety.
   • May have difficulty caring for themselves and depend on family or caregivers. Travel ban prevents family reunion and may reduce the likelihoods of family members to provide timely care and support
   • PLWDs may face challenges in access to information and communication in accessible and disability inclusive ways e.g. sign language or braille needs

3. Insufficient information
   • Older persons and PLWD might have inequities in access to public health messaging due to lack of access to digital media channels and new technologies.

4. Social Inclusion
   • Health-care personnel are not well trained on disability inclusion and service delivery for PLWD.
Global Covid-19 Effects on Children 1/2

1. Education
   • Where distance or e-learning mechanisms are attempted, they will not reach all children and youth – those without internet access or adult supervision will be disadvantaged.
   • Even when schools reopen, children will be returning to only 53 per cent of schools having basic hygiene services (defined as having a handwashing facility with water and soap available).

2. Nutrition
   • As schools close, school lunches and other support services are no longer available for the poorest children who risk further malnourishment.

3. Immunization
   • Due to the delay, suspension and disruption of immunization services, child mortality from preventable diseases will increase especially in remote and underprivilege areas.

Note: data as of March 18 2020
Source: Reuters, with data from UNESCO
Global Covid-19 Effects on Children 2/2

4. Violence, abuse and neglect
   - As communities are disrupted, children already at risk of violence, exploitation and abuse will find themselves even more vulnerable.

5. Access to public information
   - Younger children might not have access to or might find it difficult to understand publicly available information on COVID-19

6. Household incomes
   - Loss of household incomes for the poor and vulnerable (including migrant workers) affects the financial capacity of parents and caregivers to access the basic services that are essential to meeting children's needs.
   - Prolonged periods of school closure and movement restrictions may lead to emotional unrest and anxieties in the short term and a loss of human capital in the long run
Before the outbreak, the global economy already exhibited underlying vulnerabilities. These include:

- high levels of debt
- trade tensions between major economies
- gaps in income, wealth and job stability in many countries

The world is more globalized today than during some previous pandemics:

- China is more integrated in the global economy now than during SARS episode in 2003 → COVID-19 spreads more rapidly and has bigger effect on the world economy
- Combined with the COVID-19 outbreak, there was recently a slump in oil prices
COVID-19 Affecting All SDGs

Reduced commitment to climate action; but less environmental footprints due to less production and transportation.

Population living in slums face higher risk of exposure to COVID-19 due to high population density and poor sanitation conditions.

Economic activities suspended; lower income, less work time, unemployment for certain occupations.

Women account for majority of health and social care workers who are more exposed to COVID-19.

School closed; remote learning less effective and not accessible for some.

Loss of income, leading vulnerable families to fall below poverty line.

Food production and distribution could be disrupted.

Devastating effect on health outcomes.

COVID-19 pandemic

COVID-19: Supply-Side and Demand-Side Shocks

Containment Measures
- Quarantine
- Isolation
- Travel Restrictions
- Schools closure
- Ban on Public Events
- Closing of Services

Supply-Side Shocks
- Production and Supply chain disruptions
- Liquidity shortages

Demand-Side Shocks
- Lower demand for consumer goods and services
- Job losses and weaker financial markets
Lockdown Effects

Globally, most of the small and medium firms (SMEs) have less than one-month cash-flow to stay in business.

In low and middle-income countries, SMEs are under even harder pressure.

Large firms have capacity to resist, but need to monitor the threshold to minimize jobs loss.

Data Source: WHO Africa. /
Covid-19 in Africa

- Africa as a region still has comparatively few cases of Covid-19
- Only two countries in the WHO African region could test for Covid-19 at the start of the outbreak
- As of 30th March, all forty-seven countries in the WHO African region can test for COVID-19
- The extent to which countries can test and treat Covid-19 is however dependent on health care systems

Source: https://www.afro.who.int/health-topics/coronavirus-covid-19
Africa: Health at a Glance

- Life expectancy and universal health coverage are lower in Africa than the rest of the world
- Resilience is low in African health care systems

Regions follow WHO classifications:
- Africa
- EMR: Eastern Mediterranean Region
- SEAR: South-East Asia Region
- AMR: Region of the Americas
- WPR: Western Pacific Region
- EUR: European Region
Deaths per 100 000 Population from Infectious Diseases Covered by SDG Target 3.3 (2016)

Diseases Affect Africa Harder

New HIV Infections (2017)

Mortality rate attributed to exposure to unsafe WASH services (2016)
Africa: Global Health Security Index / GHS Index

The average overall GHS Index score is 40.2 out of a possible 100. While high-income countries report an average score of 51.9, the Index shows that collectively, international preparedness for epidemics and pandemics remains very weak.

GHS: https://www.ghsindex.org/
Major Public Health Risks in Africa

- Lower respiratory conditions and HIV represent the top two cause of both morbidity and mortality

- These can both increase the deadliness of Covid-19 in Africa

- Several other of these major public health risks have a strong relation to Covid-19

As of 2018, Sub-Saharan Africa’s GDP per capita stood at $1,585.
- From Low to High-Income countries

Before the COVID-19 outbreak, Africa’s economy had been predicted to grow 3.9% in 2020 and 4.1% in 2021 (AfDB, 2020).
- Large difference in growth rates among SSA countries

In the 2009 crisis GDP per capita growth dropped to almost zero

In 2016, SSA had negative GDP per capita growth

Data Source: World Development Indicators, World Bank
Some major contributors to Africa’s GDP include; Agriculture, Forestry & Fishing, Tourism, Industry and Manufacturing, Oil, Mining, and the Financial Sector.

Many of these sectors are now exposed:
- Lower demand domestically and abroad
- Dependence on other countries for imports of intermediate good
- Travel restrictions
- Weaker financial markets

In many of these sectors, workers cannot “work from home” → job losses

There is a risk for increasing poverty levels.
## Covid-19 & Economic Shocks on Africa

<table>
<thead>
<tr>
<th>Containment Measures</th>
<th>Global Hardship Spillovers</th>
<th>Oil Price Fall and Locust Swarms</th>
</tr>
</thead>
</table>
| • Measures that are crucial to slowing the spread of the virus will have a direct cost on local economies  
• The disruption to people's daily lives means less paid work, less income, less spending, and fewer jobs. And, with borders closed, travel and tourism are quickly drying up, and shipping and trade are suffering | • Reduced global demand  
• Disruptions to production and world supply chains  
• Tighter global financial conditions will limit access to finance  
• Countries are likely to also see delays in getting investment or development projects off the ground | • Oil prices down by more than 50 percent since the start of the year. Will hurt oil exporting countries  
• Agricultural production had begun to be distorted by the locust swarms in East Africa in early 2020 |
African Economy and People Already Impacted

- Closure of commercial outlets, government institutions and corporations – as well as an abrupt stop of tourism – has brought countries to a halt.

- Lockdown means the informal sector lose their source of income.

- The lack of income loss insurance produces a high risk that workers will not implement social distancing.

- There is a risk for increases in poverty levels.

*Covid-19 Cases data as of March 29 2020

Africa Trade Dependence on China (1/2)

- SSA countries have a high dependency on China for exports and imports

- SSA countries rely on China for trade → COVID-19 likely to damage SSA’s role in GVCs

- Disruption from China was initial shock. Now we are seeing impacts from Europe and North America

Data source: World Integrated Trade Solutions, World Bank
Middle-income countries have benefitted from China import penetration.

Availability of Chinese imports goods have benefitted gross output and value added.

Africa relies on China for intermediate goods imports → COVID-19 damages Kenya’s role in value chains.

Source: GLOBAL VALUE CHAIN DEVELOPMENT REPORT 2019, WTO
Africa’s Debt Makes it Vulnerable

• Heavily-indebted developing countries face an economic threat

• A decade ago, the region was spared the brunt of the global financial crisis. Lower debt levels meant most countries had room to increase spending and they were able to implement counter-cyclical policies

• Today, many countries in sub-Saharan Africa have limited room in their budgets to increase spending. They are also more reliant on global capital markets today

Data Source: IMF 2019

Source: Global Municipal Database, UN-Habitat 2018
In Africa, 60% of urban settlements are informal, and most of the populations live in precarious housing where families share rooms and houses. Informal settlements and overcrowded public spaces such as buses and markets may spread COVID-19 in unpredictable ways. The lack of access to land, shelter, basic services and transport i) drive a higher risk from the virus itself and ii) make the country less resilient to a shock like this.
COVID-19: The Kenyan Economy
Some major contributors to Africa’s GDP include; Agriculture, Forestry & Fishing, Tourism, Industry and Manufacturing, Mining, and the Financial Sector.

Many of these sectors are now exposed:
- Lower demand domestically and abroad
- Dependence on other countries for imports of intermediate goods
- Weaker financial markets

In many of these sectors, workers cannot “work from home” → job losses

There is a risk for increasing poverty levels.

Effects on Tourism

Tourism contributes:
- 8.5% of Africa’s GDP
- 6.7% of Africa’s employment

COVID-19 Challenges:
- Travel restrictions, and the cancellation of many planned visits, flights, business and leisure events
- Drop in the important tourism sector, where many business owners lack insurance to cover lost income

Effects on Agriculture

Agriculture contributes:
- 15% of Africa’s GDP
- Employs around half of the labor force

Covid-19 Challenges:
- Agricultural production had begun to be distorted by the locust swarms in East Africa in early 2020
- COVID-19 induces further shock

Kenya’s Import Partners

- China, 21.07%
- Saudi Arabia, 9.81%
- USA, 3.04%
- Indonesia, 2.62%
- South Africa, 3.68%
- UAE, 8.38%
- Japan, 5.67%
- Uganda, 2.81%
- Germany, 2.65%
- India, 10.53%

Takeaways

- More than a fifth of Kenya’s total imports originate from China.
- COVID 19 will have a significant impact on Kenya’s trade.

Note: Values represent the amount of imports as a percentage of total imports originating from respective countries.

Data Source: World Bank’s World International Trade Solution Database
Kenya’s Imports by Products

Kenya's Imports as a Percentage of the Total (2018)

Takeaways

- Kenya’s second largest import is machines & electronics, for which China is the largest partner.
- With COVID 19, there’s strain on Chinese exports, which will likely negatively affect Kenya’s economy.

Data Source: World Bank’s World International Trade Solution Database
Kenya’s Export Partners

Kenya's Top 10 Export Partners Countries

- Uganda; 10.10%
- USA; 7.72%
- U.K; 6.56%
- UAE; 5.71%
- Pakistan; 9.69%
- Netherlands; 7.56%
- Tanzania; 4.85%
- Egypt; 3.28%
- Rwanda; 2.91%
- DRC; 2.48%

Takeaways
- Some of Kenya's major export destination countries have high COVID 19 confirmed infections
- Lower demand among these countries will decrease Kenyan exports

Note: Values represent the amount of exports as a percentage of total exports destined to respective countries

Data Source: World Bank’s World International Trade Solution Database
Kenya’s Exports by Products

Kenya’s Exports as a Percentage of the Total (2018)

- Cash Crops: 6.55%
- Food Products: 4.04%
- Chemicals: 2.58%
- Textiles and Clothing: 2.04%
- Fuels: 2.72%
- Minerals: 7.07%
- Wood: 7.69%
- Plastic or Rubber: 8.30%
- Metals: 4.76%
- Machines and Electronics: 4.04%
- Others: 6.55%

Takeaways

- COVID-19 lockdowns in other countries is causing a lower demand for several of these products.
- Trading routes are being blocked by lockdowns.

Data Source: World Bank’s World International Trade Solution Database
Kenya Trade Dependence on China

- Kenya comparatively has a higher dependency on China for imports than other African countries.
- Kenya comparatively has a lower dependency on China for exports than other African countries.

Data source: World Integrated Trade Solutions, World Bank
Kenyan Economy and People Already Impacted

- Closure of commercial outlets, government institutions and corporations has brought the country to a halt
- Lockdown means the informal sector lose their source of income
- The lack of income loss insurance produces a high risk that workers will not implement social distancing
- There is a risk for increases in poverty levels

In Kenya, 60% of urban settlements are informal, and most of the populations live in precarious housing where families share rooms and houses.

Informal settlements and overcrowded public spaces such as buses and markets may spread COVID-19 in unpredictable ways.

The lack of access to land, shelter, basic services and transport i) drive a higher risk from the virus itself and ii) make the country less resilient to a shock like this.

Source: UN-Habitat (2019), Urban Planning for City Leaders in Kenya
Informal settlements contain vulnerable communities with low access to water, healthcare and sanitation.

Informal communities risk even larger exposure as they lose sources of income due to lockdown.

Informal settlement and overcrowding need policies to contain the potential effects of COVID-19 and provide support to vulnerable communities.

Source: UN-Habitat (2019), Urban Planning for City Leaders in Kenya
COVID-19: Actions and Way Forward
Kenya Facing COVID-19: Key Points

1. Economy
   • Trade dependence on China make economy vulnerable
   • Firms may be permanently affected by disruptions in supply chains
   • In many of the largest sectors, employees cannot work from home
   • Effects can already be seen in important sectors such as tourism
   • Workers of the large informal sector lose their source of income with lockdown

2. Informal Settlements
   • 60% of urban population are in informal settlements. Overcrowding and concentrations constitutes a risk. Risks for women, elders, and youth.
   • Lack of access to basic services drives a higher risk from the virus itself and makes the country less resilient to a shock like this.

3. Health Systems
   • Less than a fifth of population have health insurance (very limited conditions covered)
   • Health inequality: 14 counties are below the WHO target for health facility density
COVID-19: Mitigation and Preparedness (1/2)

1. Health Systems
   • Establish ICT application to monitor spread of COVID-19
   • Consider preparing retired doctors and nurses to act in case of emergency
   • Train college and high school students on basic protocol and support to affected areas
   • Provide universal medical COVID-19 testing and treatment: support low-capacity counties by deploying mobile teams
   • Establish separate testing and treatment facilities. Consider using public spaces

2. Human Settlements
   • Create special task force and establish permanent communication with informal settlements
   • Supervise that basic services (WASH) are available to all, including in informal settlements
   • Prepare emergency measures, mobile medical aid teams, and special fund to support emergencies
COVID-19: Mitigation and Preparedness (2/2)

3. Protecting Jobs, Small and Medium Enterprises (SMEs), Supply Chains, Informal Workers
   - Provide special credit to SMEs, create special funds to support cash-flows
   - Keep main economic sectors running by integrating production platforms
   - Support cash distribution schemes to most vulnerable population, including informal workers, and vulnerable employees in most affected sectors

4. Macroeconomic Policies
   - Provide liquidity and credit to the system
   - Monitor SMEs to allow them to operate before they reach cash-flow threshold
   - Allow main agriculture activities to operate with special health and security conditions
   - Maintain minimum transport system for cargo and internal operations

5. Support National and Multilateral Actions
   - Integrate central government actions, multilateral organizations, incorporate NGOs, and civil society.
Two major areas UN-Habitat to look at, and work with UNDP, UNICEF and others, focusing on mitigation and pathways to recovery:

1. Measures to mitigate breakdown of urban economies, recognizing that globally they represent the majority of GDP, that there is an urgent need to focus on the informal sector and its relationship with the formal economy. This needs to go beyond classic social safety nets and fiscal measures but also look at mitigation measures related to:
   - Predict urban – rural movements to areas of origin, pre-empting health risks while supporting alternative livelihoods
   - Deal with pressure on access to adequate housing, risk of evictions, with a focus on those already without access to begin with (slums, homelessness, etc.)
   - Alternative livelihood options in the local formal and informal sector (ex. local PPE production, community mobilisation, safe options for informal markets)

2. Measures to support local governments and service delivery actors in their frontline role, including in socio-economic mitigating measures they can put in place, while ensuring financial capacity for critical service delivery (water, waste management, etc.) focusing on LDCs and cities with a high degree of informality. This should include measures to:
   - Include the informal sector in national economic measures
   - Provide direct access to financing, expanding the fiscal capacity of local governments and critical service providers to act;
   - Expand systems of community grants and communal cash-transfers for direct use in informal settlements and slums, building on tested approaches for slum upgrading)
COVID-19: Socioeconomic Impact on Africa - Health, Economy and Planning -
