^v Includes Ajman and Ash Shariqa

Notes:

Land consumption rates are estimated based on classification of Landsat imagery for the years 1990, 2000 and 2015

Population data used to compute the population growth rate is GHS-POP

City/urban area used in the analysis has been generated using a classification approach based on the Urban Extent or the Degree of Urbanization concepts to city definition

Source: United Nations Human Settlement Programme (UN-Habitat), Global Urban Indicators Database 2020

Table C.2: Proportion of Population Living within Convenient Walking Distance to Public Transport in Selected Cities (%), 2019

Country	Cities	Proportion of population living within convenient walking distance to public transport (%)	Country	Cities	Proportion of population living within convenient walking distance to public transport (%)
Australia	Perth	45.45	India	Malegaon	48.21

Notes

Indicator is computed as share of population who live within a walking distance (along a street network) of 500m to a low capacity public transport system (eg bus, tram) and 1000m to high capacity public transport systems (trains, ferries, etc)

Only public transport stops which are mapped are included in the analysis and can include both formal and informal stops where available. Many cities have an informal network which is not fully mapped and may thus record higher levels of access to public transport than reported here

Only public transport modes are considered, which do not include taxis

Data on public transport stops is sourced from city maps, OSM, GTFS, UITP, Google, and point mapping in some cities. Estimates by DG REGIO are based on data from OSM, TomTom, NSIs, Eurostat, Copernicus Urban Atlas

Data used to estimate population with access to public transport is based on grid level population disaggregation directly from city/country data, HRSL (Facebook and CIESIN), WorldPop or GHS-Pop.

City/urban area used in the analysis has been generated using a classification approach based on the Urban Extent or the Degree of Urbanization concepts to city definition

Source: United Nations Human Settlement Programme (UN-Habitat), Global Urban Indicators Database 2020

** Data from European Commission DG REGIO

^a Includes Az-zarqa, Ar-Rusayfah, Al-Quwaysimah, Tila al-Ali, Wadi as-sir, Al-Jubayhah, Khraibat as-suq and Sahab

^b Includes Hawalli, Al-Farwāniyah, Al-Fintās, Al-Jahrā', Janūb al-Kuwayt, Al-Manqaf, Al-Firdaws and Mubārak al-Kabir

^c Includes Mohamma town

^d Includes Bawashar, Matrah and Aseed (Assib)

^e Includes Jabaiyah, Bayt Lāhiyā

^f Includes Dayr al Balah

^g Includes At-Tadamun and Sukrah

^h Includes Ajman and Ash Shariqa

Table C.3: Open Space Indicators in Selected Cities, 2019

Country	Cities	Share of urban area allocated to open public space (%)	Share of urban area allocated to streets (%)	Share of urban area allocated to streets & open public space (%)	Proportion of population living within convenient walking distance to open public space (%)

Notes:

Indicator is computed as share of urban land in streets and open public space, as well as share of population who can access/live within a walking distance (along a street network) of 400 m to an open public space.

An open public space is defined as openly and freely accessible space for all (without any cost implication). Identification of open public spaces are based on data compiled from city land use plans as well as data available from open sources such as OSM and google.

Data used to estimate population with access to open public spaces is based on grid level population disaggregation directly from city/country data, HRSL (facebook and CIESIN) or WorldPop. Analysis year is 2019, which in some cases includes population data for 2018.

City/urban area used in the analysis has been generated using a classification approach based on the Urban Extent or the Degree of Urbanization concepts to city definition.

The urban/city area used for the indicator computation may be larger or smaller than the official municipality boundaries.
