“

In our increasingly digital world, technology is reshaping urban life... but innovation must close gaps – not widen them. A truly smart city puts people first – especially the most vulnerable.

António Guterres
United Nations Secretary-General

Smart cities in preparation and in response to urban crises

The world is facing an unprecedented convergence of conflict, climate change, and economic instability that is forcing millions from their homes. As displacement increasingly becomes an urban reality, cities are emerging as both frontline responders and critical arenas for long-term solutions.

By 2025, **more than 117 million people were forcibly displaced**, according to UNHCR. More than half of internally displaced persons, refugees, and migrants are seeking refuge in cities and towns, making displacement a critical urbanization issue.

In Sudan, over 12.8 million people are displaced, including 8.8 million internally, overwhelming towns and cities already struggling to provide housing and services. In Gaza, nearly 2 million people are displaced as more than 92 per cent of homes are destroyed or severely damaged, leaving the entire population facing an extreme humanitarian crisis.

Each year, disasters add to this toll, damaging or destroying more than 92,000 essential facilities and causing 1.6 million service disruptions worldwide.

These overlapping crises contribute to inequality. Conflict, displacement, and climate change disproportionately impact the most vulnerable people, widening existing inequalities and creating new ones. It also puts a strain on urban services, which often leads to social and economic exclusion of the most vulnerable people.

Humanitarian aid is essential, but it is not enough. Responses must pivot earlier towards development- and government-led solutions for more long-term outcomes. In addition, housing, land, and basic services must be placed at the centre of urban crises and displacement solutions. Utilizing innovation and tech transformation is necessary to help accelerate sustainable urbanization while putting people at the centre.

The global housing crisis affecting nearly 3 billion people – including the 1.1 billion living in informal settlements and slums, in addition to **over 300 million experiencing homelessness** – highlights the urgent need for digital solutions to improve access to housing, land and basic services.

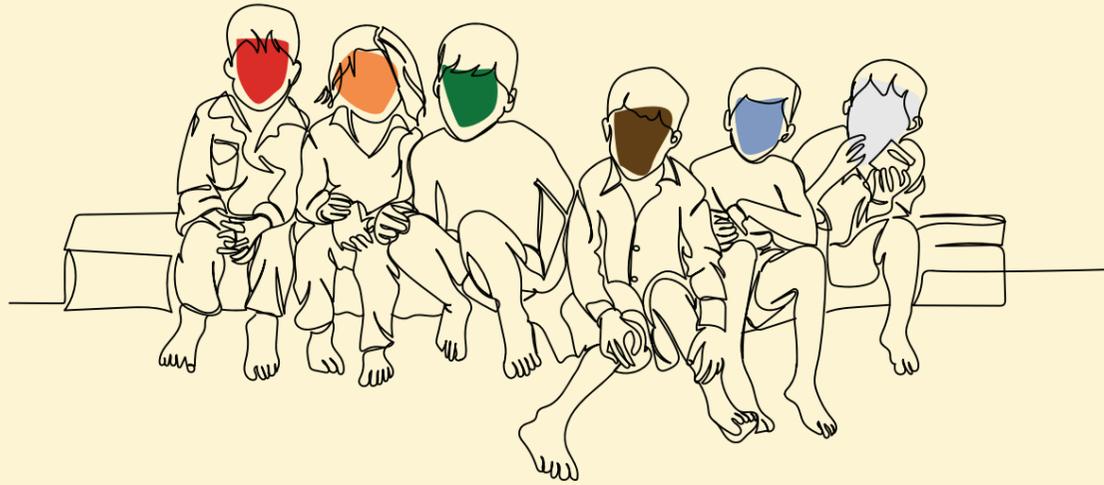

Digital technologies can be leveraged to enhance how cities and human settlements are designed, planned, managed and governed. Cities globally are leading the way, as they increasingly adopt digital technology solutions and data to deliver better services for residents and address critical urban challenges and opportunities.

People-centred smart cities are harnessing digital innovation while ensuring that the design and implementation of technologies are driven by the needs of people and communities and full consideration of broader societal and environmental impacts.

Data-driven decision making, technology, and AI through smart cities can be leveraged to improve urban life and recover from current shocks and crises. It is the strategic use of technology to close gaps – rather than widen them – that will help address these global crises to create a model of urbanization based on equity and inclusion, ensuring that the cities of the future leave no one behind.

Disasters, rising urbanization, and smart cities: Key figures

Urban areas are increasingly being affected by multiple overlapping crises that threaten well-being, including conflict and climate disasters which are becoming more frequent, longer-lasting and more severe. As urban centers grapple with multiple crises, data-driven decision making through technology and AI can be leveraged to recover from these shocks, and improve urban life.

Nearly **3 billion** people face housing inadequacy and more than **1.1 billion** live in informal settlements and slums

The number of displaced people globally stands at **117 million** and has almost doubled in the last decade²

Conflict, wars, and violence are on the rise, with **61 active conflicts**¹

1.1 billion people in informal settlements and slums are left out of smart city plans and development because of poor data, high costs, and weak connectivity

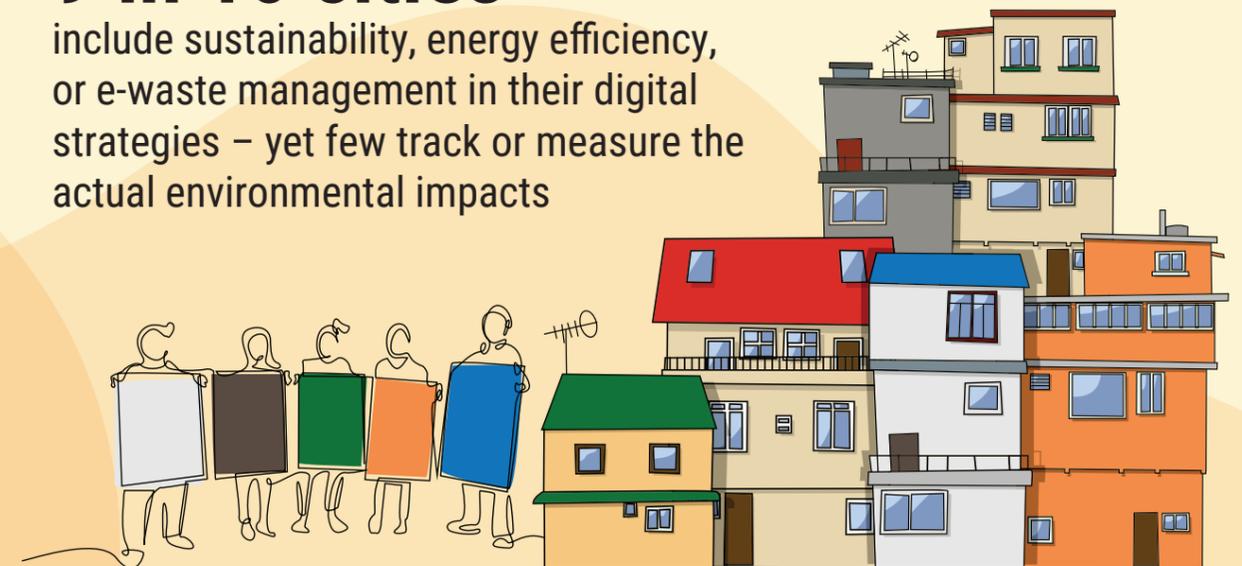

¹Uppsala University
²UNHCR

Extreme weather events led to the **highest number of displacements** in the last 17 years.³

2025 is set to be the second or third **warmest year on record**⁴

Globally, **2.7 billion** people remain offline, while over one-third of urban households lack a computer, limiting access to education, jobs, and essential services

Nearly **9 in 10 cities** include sustainability, energy efficiency, or e-waste management in their digital strategies – yet few track or measure the actual environmental impacts

³Earth.org
⁴World Meteorological Organization

Urban October: An overview

Urban October offers a platform for people everywhere to take part in conversations about the challenges and possibilities created by the rapid evolution of cities and towns.

Every October, individuals and organizations dedicated to sustainable urban development are invited to organize or join events, activities, and dialogues. The month opens with World Habitat Day on the first Monday of October and closes with World Cities Day on October 31.

In 2025, there were 579 events held in 98 cities and 58 countries during Urban October.

The Global Observance of World Habitat Day was held on 6 October 2025 at the UN-Habitat Headquarters in Nairobi, Kenya, under the theme **“Urban Crisis Response.”** World Habitat Day focused on addressing multiple crises affecting urban areas, including climate and conflicts that are contributing to inequality. A key highlight of the World Habitat Day global observance is the UN-Habitat Scroll of Honour

Award, which recognizes outstanding contributions to sustainable urban development.

The Global Observance of World Cities Day was held on 31 October 2025 in Bogotá, Colombia, under the theme **“People-Centred Smart Cities.”** It showcased how data-driven decision making, technology, and AI can be used to improve urban life and recover from current shocks and crises.

As the UN agency mandated to lead on sustainable urbanization, UN-Habitat supports cities in achieving sustainable and equitable urban futures through a comprehensive approach that promotes equality, well-being, and shared prosperity across all dimensions of sustainable development, as outlined in the New Urban Agenda adopted by the United Nations in 2016.

Global reach

579

events worldwide in
242 cities in 58 countries

38 million

people reached online by
Urban October event hashtags

The global observances of World Habitat Day and World Cities Day were held in a hybrid format, both virtually and in person, significantly expanding their reach and impact. UN Web TV broadcasts featured International Sign Language interpretation and Zoom events included real-time captioning and translations into multiple languages, making the events inclusive and accessible.

World Habitat Day 2025: Urban Crises Response

Date: 6 October 2025 | **Global Observance of World Habitat Day 2025:** Nairobi, Kenya | **Total participants:** 260+ participants from 48 countries, 103 cities | **Events:** 36 events in 32 countries and 32 cities | **Reach:** 500,000+ people reached through social media

As displacement increasingly becomes an urban challenge, cities are on the front line of crisis response and recovery. With over 60 per cent of refugees and more than half of internally displaced people living in urban areas, inclusive urban planning, adequate housing, secure land tenure, and access to basic services are critical to prevent the expansion of informal settlements and to protect vulnerable communities.

260+
participants from
48 countries,
103 cities

When supported by strong legal frameworks, financing, and institutional capacity, cities can not only mitigate the impacts of displacement but also enable displaced populations to contribute to more resilient, inclusive, and sustainable urban development.

The challenge

- More than **117 million people have been forcibly displaced** in 2025, according to UNHCR, with more than 60 per cent of them seeking refuge in cities.
- **92,000+ essential facilities** are damaged or destroyed each year as a result of disasters

On World Habitat Day 2025, UN-Habitat urged action to **strengthen local leadership, build resilient urban systems, and ensure no one is left behind in times of crisis.**

- **1.6 million service disruptions** result annually worldwide due to disasters
- **3 billion people** are affected by the global housing crisis
- Conflicts, political instability, and climate change are worsening the global housing crisis, already affecting nearly 3 billion people and placing even greater strain on vulnerable communities and urban areas.
- Without inclusive urban and territorial planning, crisis-driven displacement will accelerate the expansion of informal settlements and slums, which already house 1.1 billion people globally.

From teacher to precarious worker: Egle's story of urban resettlement

Egle's life changed when she fled northern Uganda to seek safety in Nairobi, Kenya. Like millions of others uprooted by global crises, she found refuge not in a camp, but in a city.

In 2025, a record 117 million people were displaced, placing immense strain on housing, services, and livelihoods in cities across the globe, which are home to more than 60 percent of displaced people.

"Home is so important to me. That is where I was born... home is the best," she reflects. "As a foreigner, life is so difficult."

Previously a teacher in Uganda, she now works as a housemaid in Kenya. This precarious work has left her in search of dignity, fair treatment, and enough food to get through the day. The instability she experiences with work mirrors her living conditions, as she lacks access to safe, adequate housing.

"The main challenge is to obtain an identification card," she explains. Without this, Egle is unable to access basic services and economic opportunities.

In 2025, UN-Habitat's World Habitat Day focused on how cities can respond to crises by prioritizing adequate housing, secure tenure, and basic services, so that people like Egle can rebuild their lives and reclaim a sense of home.

Recommendations

- Place adequate housing, secure land tenure, and access to basic services at the centre of crisis recovery to avert the worsening global housing crisis and expansion of informal settlements and slums.
- Multilevel governance should enable local governments and local communities to be central to their own recovery. They can achieve this through building local government capacity, and establishing legal, policy, and solid financing to respond to urban crises.
- Community-led settlement processes should be supported using participatory, local approaches to foster social cohesion and reduce pressure on overstretched services in urban areas.
- Spatial and territorial profiling should be applied to map settlement patterns, drivers of mobility, and potential breakdowns in urban infrastructure and services in order to make population shifts such as displacement visible and enable more targeted crisis responses.

“Humanitarian aid is essential, but it is not enough. People want to regain their homes – old or new – as soon as possible. We need to think earlier about recovery, and government- and community-led solutions.”

Anacláudia Rossbach
Executive Director of UN-Habitat

“Displacement is, at its core, a housing challenge, but with inclusive urban planning and investment in sustainable housing, it can become a contributor to sustainable development.”

Filippo Grandi
UNHCR High Commissioner

Successful urban response practices

In Herat and Kabul, Afghanistan, UN-Habitat has supported over 6,000 internally displaced persons (IDPs) and returnee households. Families have gained tenure security, improved services, and opportunities for investment. The area-based approach ensured both displaced and host communities benefitted, fostering integration.

In Beirut, Lebanon, the Sabra-El Jassar Community-Led Upgrading Project engaged residents directly in planning and decision-making. The project improved housing and basic services in a marginalized neighbourhood, promoted inclusivity, and strengthened social cohesion by ensuring all community groups benefitted equally.

World Habitat Day speakers

- Inger Andersen, Executive Director, United Nations Environment Programme, UNEP
- Paula Betancur, UN Special Rapporteur on the Human Rights of Internally Displaced Persons
- Byron Buyu, Secretary for Urban and Metropolitan Development, Government of Kenya
- Filiep Decorte, Chief, Programme Development Branch, UN-Habitat
- Filippo Grandi, UN High Commissioner for Refugees
- António Guterres, United Nations Secretary-General
- Nga Kor Ming, Minister of Housing and Local Government and President of the United Nations Habitat
- Maymucha Lauriston, Head of Office – East Africa Multicountry Office, OHCHR
- Anacláudia Rossbach, Under-Secretary-General and Executive Director, UN-Habitat

Scroll of Honour Award 2025

The UN-Habitat Scroll of Honour Award is one of the most prestigious awards of its kind. Presented in 2025 during the Global Observance of World Habitat Day at the UN-Habitat headquarters in Nairobi, Kenya, the award recognizes initiatives that have made outstanding contributions to improving human settlements, providing housing, addressing the challenges faced by people living in poverty or displacement, and enhancing the quality of urban life.

The Scroll of Honour Award aligns with the Sustainable Development Goals, particularly Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable.

In 2025, UN-Habitat received 141 nominations and selected four winners who embody best practices and innovative approaches contributing to sustainable cities and communities;

- **Just a Change, Lisbon, Portugal** – for its volunteer-driven housing rehabilitation model, restoring unsafe homes across Portugal and bringing dignity, safety, and sustainability to vulnerable families through inclusive, community-based action.
- **Clara Marina Brugada Molina, Mexico City, Mexico** – for her visionary “UTOPIAS” model of urban regeneration, reclaiming neglected public spaces to create inclusive hubs for culture, health, education, and care, rooted in equity and community participation.

- **Public Works Studio, Beirut, Lebanon** – for its pioneering “Housing Monitor” initiative, which enables vulnerable residents to report eviction threats and access legal and social protection, while advancing housing rights and spatial justice.
- **Israel Smart, Jos Plateau, Nigeria** – for his transformative “Hydroponic Farm-in-a-Box,” a solar-powered, circular farming innovation built from recycled plastics that tackles food insecurity, unemployment, and plastic pollution while empowering women and youth.
- **In addition, a Special Citation was awarded to Gangwon State (IUTC), Republic of Korea**, for strengthening global capacity for sustainable urban development through training and international collaboration.

Case study

Defending housing rights in Beirut through innovation and advocacy

Founded in Beirut, Lebanon, in 2014 by an architect and a graphic designer, Public Works Studio is a women-led non-governmental organization advancing spatial justice in a city where rising rents, evictions and environmental degradation threaten vulnerable residents.

At the heart of its work is the Housing Monitor, the first platform of its kind in the South West Asia and North Africa region, enabling residents to safely report eviction threats and housing violations. These reports trigger legal and social support, mobilize tenant networks, and generate evidence to challenge unjust policies.

From defending refugee tenants against mass evictions to drafting Lebanon’s first Holistic Right to Housing Law, Public Works Studio blends grassroots organizing with institutional advocacy to shift power toward marginalized communities. The 2025 Scroll of Honour Award-winning organization has a transferable model that combines data-driven monitoring with direct action, education, and coalition-building, making it both a watchdog and catalyst for more inclusive cities.

“The UN-Habitat Scroll of Honour Award brings much-needed attention to the otherwise absent struggles of various resident communities in Lebanon. It also highlights the importance of documenting human rights violations as part of the efforts to fight against them.”

Jana Haider
Housing Monitor Coordinator and Casework Manager, Public Works Studio

World Cities Day 2025: People-centred smart cities

Date: 31 October 2025 | **Global Observance of World Cities Day 2025:** Bogotá, Colombia | **Total participants:** 3,000 participants from 82 countries attended celebrations in Bogotá | **Events:** 28 cities across 21 countries hosted World Cities Day events | **Reach:** 37 million people reached through social media

In smart cities globally, digital innovation is being used to close, rather than widen, equity gaps, particularly for the 1.1 billion people in informal settlements.

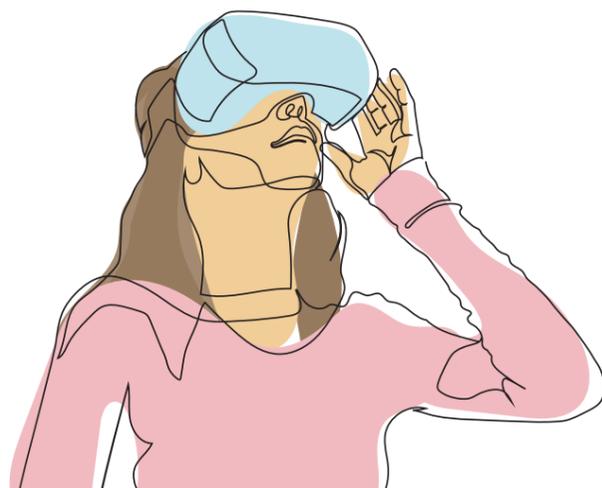

3,000

participants from 82 countries attended celebrations in Bogotá

AI, geospatial tools, and participatory digital platforms can strengthen disaster preparedness, address housing shortages, expand essential services, and create greener, safer urban spaces. As cities go digital, progress cannot be measured by innovation alone, but by inclusion, because a true smart city is one that serves all its people.

The challenge

- **1.1 billion people in informal settlements** and slums are left out of smart city plans and development because of poor data, high costs, and weak connectivity
- **90 per cent of people** in Latin America and the Caribbean will live in cities by 2050, where urbanization has progressed faster than almost anywhere else in the world
- **2.8 billion people** globally lack access to adequate housing, secure land tenure, or basic water and sanitation services
- Without inclusive planning and community participation, digital transformation can deepen inequality, creating a new “digital urban divide” where millions of people in cities – especially in informal settlements – are excluded from decision-making and opportunities
- Cities and local governments face barriers in adopting digital solutions, due to limited budgets, low technical capacity, and outdated systems for managing land, infrastructure, and services

©UN-Habitat

©UN-Habitat

“Smart cities must be people centred. Technology should serve citizens, and not the other way around.”

Anacláudia Rossbach
Executive Director of UN-Habitat

“Urban intelligence cannot be understood as a single model, but rather, the capability of adapting technological and financial solutions to the needs of each territory.”

Edna Elena Vega Rangel
Secretary of Rural, Territorial and Urban Development, Mexico

Roundtable 1

Achieving adequate housing through people-centred smart cities

This roundtable fostered discussions on the enablers and barriers in implementing people-centred digital strategies for housing and explored how digital solutions and tools, when guided by people-centred principles, can accelerate progress toward adequate housing and improved service delivery. For example, AI, geospatial tools, and participatory digital platforms can strengthen disaster preparedness, address housing shortages and create greener, safer urban spaces – all with citizens at the heart of planning.

“Housing is where urban life truly happens – it’s where the transformation of the city begins. The infrastructure and digital transformation projects we are leading allow us to build a Bogotá that puts people at the centre.”

Vanessa Velasco
Secretary of Habitat, Bogotá

Roundtable 2

Digital innovation to enhance urban infrastructure, land use and basic service provision

As cities go digital, progress cannot be measured by innovation alone, but also by inclusion, because a true smart city is one that serves all its people. This roundtable convened leading voices from governments, cooperation agencies, the private sector, and development partners to share experiences, tools, and strategies for harnessing digital innovation to improve urban governance and enhance service delivery for all. The panel shared smart city innovations to core urban systems from around the world, while identifying opportunities for international collaboration, public-private partnerships, and investment to expand digital solutions that serve marginalized communities.

“It’s very important that we consider how to minimize the risks of technology. We must have dialogue around people-centred smart cities ... to ensure that we leverage this technology for its maximum capacity to improve people’s lives.”

Edlam Abera Yemeru
Director (a.i.), External Relations, Strategy, Knowledge and Innovation, UN-Habitat

Recommendations

- Embed community participation at every stage so that all can become co-creators of digital solutions, not passive recipients. This will ensure that residents – particularly those who are often excluded such as residents of informal settlements – can benefit from digital solutions in housing, transport, and services.
- Use digital innovation as a tool for reducing urban poverty and inequality, by expanding access to affordable housing, decent jobs, and essential services for those most often excluded.
- Build climate resilience into digital planning by using data and predictive tools to protect high-risk communities.
- Leverage data and technology to cut emissions, manage resources, and protect people from the impacts of climate change – ensuring smart cities are also resilient cities.

“A people-centred smart city is a city that leverages data and technology for the benefits of its people. It’s a city that considers everyone and leaves no one behind... it’s a city that thinks about the people before the technology.”

Roberta Maio
Digital Rights and Inclusion Officer, UN-Habitat

“It is becoming increasingly clear that cities bear the responsibility of leading major social change. They are a melting pot of talent, knowledge, and aspirations of millions of people.”

Carlos Galán
Mayor of Bogotá, Colombia

Successful smart city practices

In Brazil, UN-Habitat and the State Government of Alagoas turned digital transformation into a driver of inclusion. A people-centred smart cities strategy is now guiding municipalities of all sizes, improving access to housing, services, and connectivity. The approach has made Alagoas a regional leader – recognized with the 2025 LATAM Smart City Award – for showing how innovation can deliver tangible progress on the SDGs and the New Urban Agenda.

In eThekweni, South Africa, UN-Habitat piloted Building & Establishment Automated Mapper (BEAM) which uses machine learning to automate building mapping from aerial images. BEAM helped local authorities track urban growth, plan services, and assess vulnerabilities. Today, the tool is deployed in more than 10 cities worldwide, supporting evidence-based decision-making for inclusive urban development.

Urban Circuit

Total participants: 21,000 | **Events:** 360 events across Brazil | **Reach:** 22,000 people reached through social media

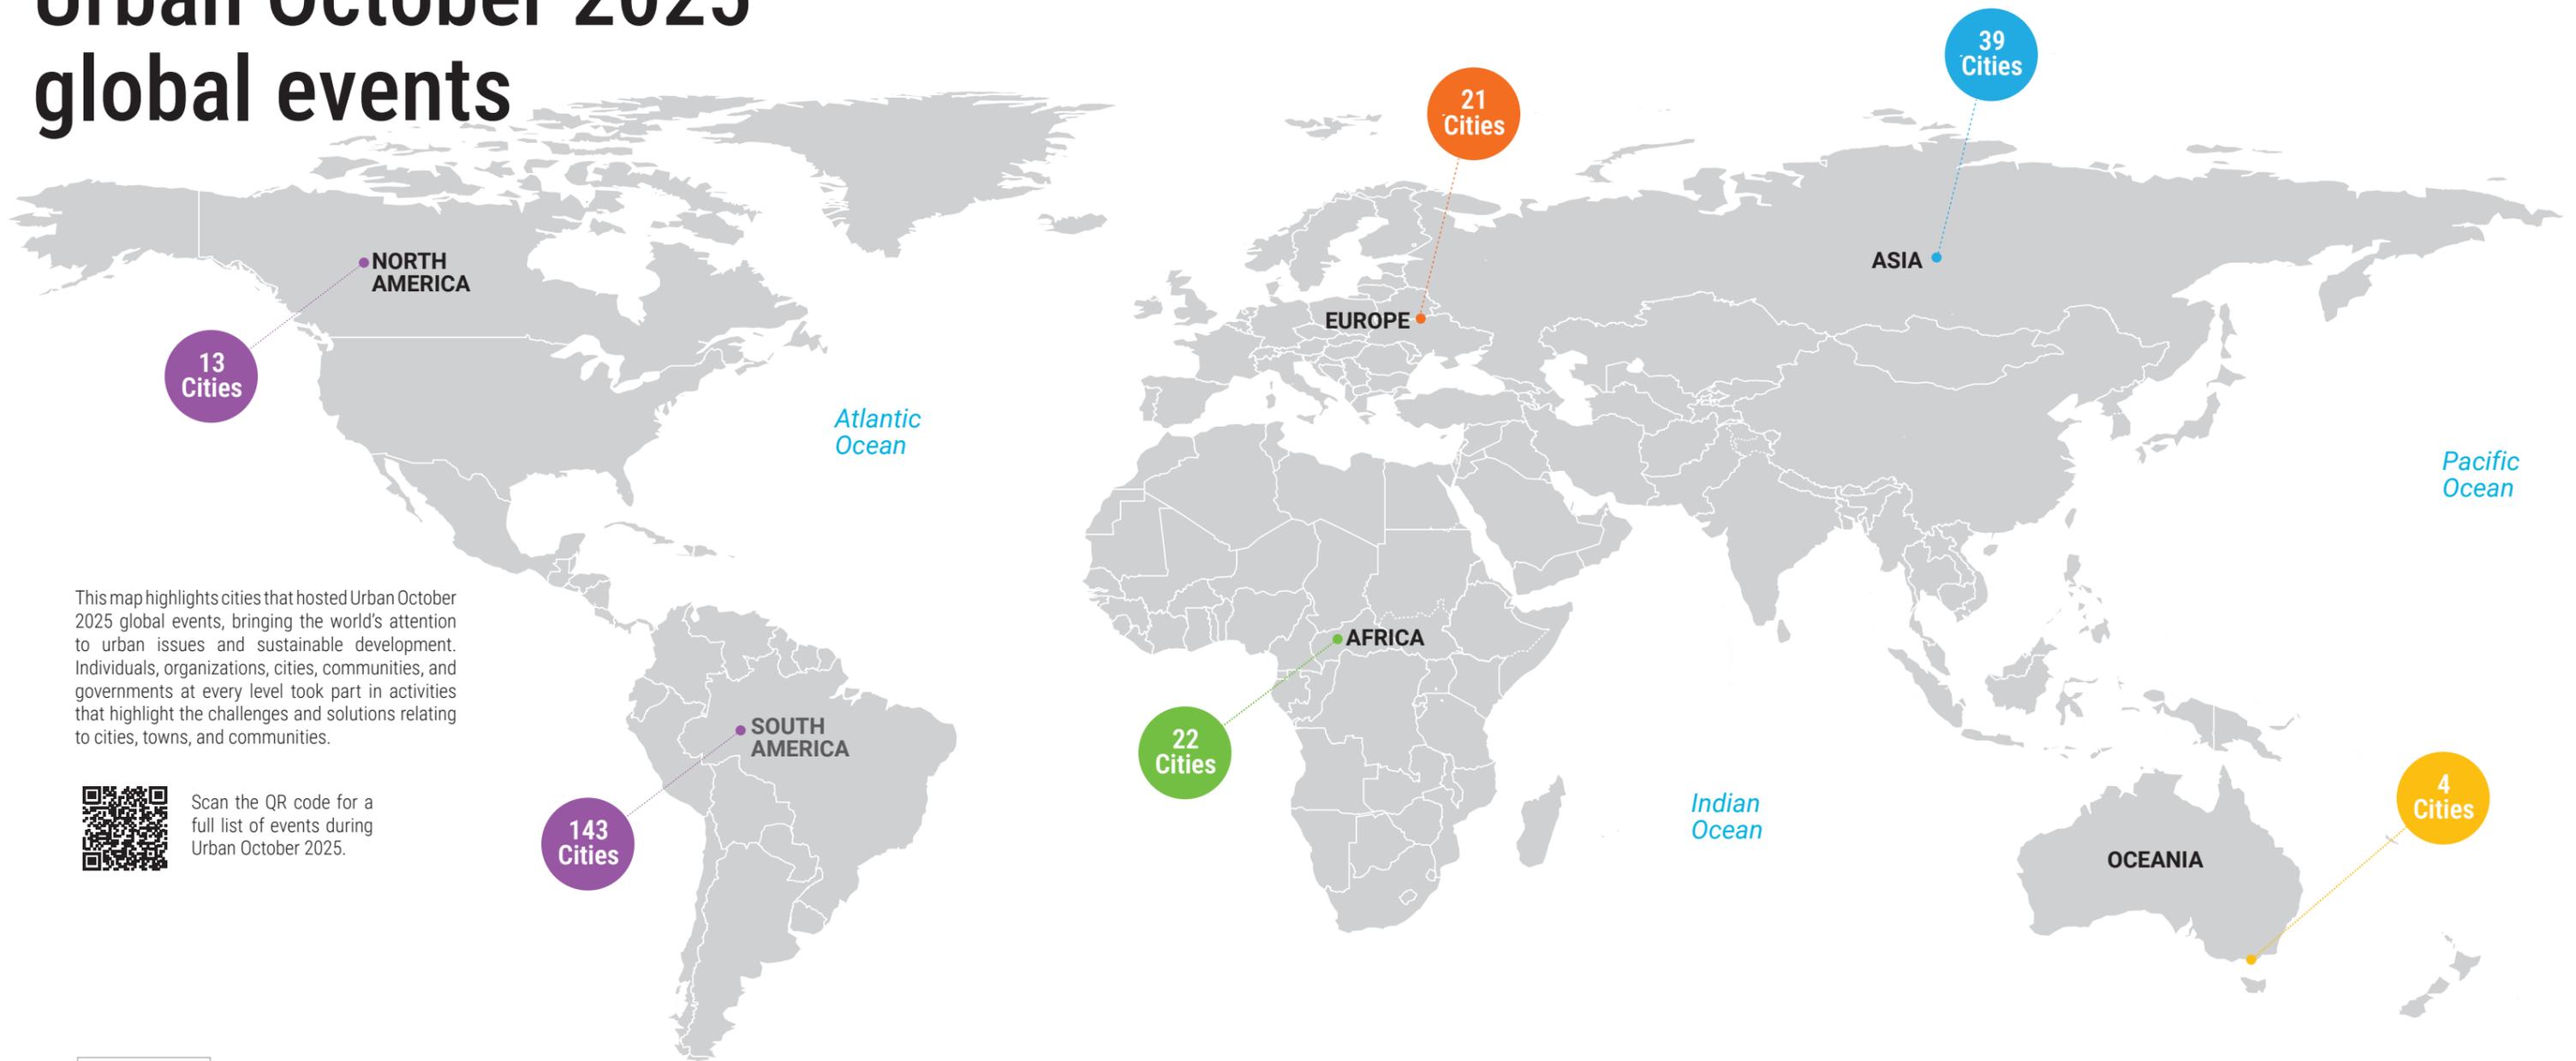

The seventh edition of Urban Circuit 2025, organized by UN-Habitat in Brazil, set new records, with 360 events held nationwide involving 21,000 participants. Held under the theme **“Facing urban challenges: Paths to more just and sustainable cities,”** the initiative fostered dialogue on the role of cities in climate action, reducing inequalities, advancing adequate housing, and building more resilient and inclusive urban spaces.

Organized with support from the Ministry of Cities, Urban Circuit underscored the importance of local climate action amid global discussions at COP30 taking place in Belém, Brazil, from 10 to 21 November 2025. The initiative ultimately highlighted how coordinated local action can meaningfully contribute to global urban and climate agendas.
